</table>
| V1.3.7  | 2018-11-30   | **Added 1 functions:**  
Support for TB4  
**Improved 3 functions:**  
- Changed some button icons.  
- Set "**admin**" as the fixed user name for logging in to terminals.  
- Allows to choose or customize the resolution of internal video source.  
**Fixed 1 problem:**  
When you publish a solution containing videos on the editing page, the **Publish solution** dialog box disappears and the software cannot be operated after you click **Publish**. |
| V1.3.6  | 2018-09-28   | **Allows to turn on or off board power.**  
**Allows to set the schedules of pages.**  
**Allows to add timers and colorful words.**  
**Allows to clear the media on pages.**  
**Allows to set the display style of weather and the unit symbol of temperature.**  
**Allows to set valid dates for smart brightness and added three repeating methods.**  
**Improved the function of creating solutions, including generating default solution name, setting resolution via specific terminals and remembering the resolution which will be used as the default value for the solution to be created next time.**  
**Improved the function of turning on DHCP service. The IP address of PC is required.** |
| V1.3.5  | 2018-08-17   | Allows the installation status of an RF module to be detected.  
**Fixed 2 problems:**  
- A wrong page appears after users click **Apply** and then click **Read back** on the video source configuration page.  
- If other marks instead of dots are used as decimal symbols in the operating system of PC, |

</thead>
<tbody>
<tr>
<td></td>
<td></td>
<td>ViPlex Express will still display dots on its user interface and the terminal will display a black screen.</td>
</tr>
</tbody>
</table>
| V1.3.4  | 2018-07-20   | • Allows to enter the editing page by clicking a solution name.  
                  • Improved the modes of editing and playing texts in solutions.  
                  • Allows some of the property values to be remembered while editing solutions and after saving solutions.  
                  • Allows solutions to be published on the solution editing page.  
                  • Allows the video formats that are not supported by terminals to be converted automatically while publishing and exporting solutions.  
                  • Allows information related to publishing tasks to be displayed while publishing solutions. |
| V1.3.3  | 2018-07-02   | • Allows to set the time format and display style of a digital clock.  
                  • Allows to set the resolution of the internal video source.  
                  • Allows images to be cropped while editing solutions.  
                  • Allows terminal MAC address to be displayed.  
                  • Allows to set Wi-Fi AP status. |
| V1.3.2  | 2018-06-08   | • Supports daylight saving time.  
                  • Supports real-time media. |
| V1.3.1  | 2018-06-04   | • Supports external storage space checking.  
                  • Supports APN configuration.  

**Fixed 4 problems:**  
• The day of the week displayed on the digital clock is wrong.  
• The time is not centered on the digital clock when the hour, minute and second are displayed.  
• The city displayed on the weather widget is wrong.  
• The connection with DHCP server is not stable. |
| V1.3.0  | 2018-05-08   | • Added several types of media, including analog clock, Office file and RSS.  
                  • Added the function of zooming in or out the media page during solution editing.  
                  • Added the function of setting the line spacing of texts and connecting the tail to head of texts |
<table>

| V1.2.0  | 2018-01-24   | - Added several types of media, including clock, weather and container.  
- Added the function module of advanced solution.  
- In the **Play Management** module, added the function of viewing screenshots.  
- In the system settings, added the function of auto reconnection. |
| V1.1.0  | 2017-11-22   | - Added multiple function modules, including brightness adjustment, video source, screen status control, time synchronization management, color temperature, play log and font management.  
- Modified several function modules, including play management, restart configuration, monitor, network configuration and server configuration.  
- In the system settings, added the RF management and custom server functions. |
| V1.0.0  | 2017-07-20   | First release |

ViPlex Express is a LAN-based screen management software. It can automatically search and connect to terminals in the same local area network (LAN), and is used for configuring screens, publishing solutions and controlling solution playing. Currently, it is available only for Windows PC.

ViPlex Express is used as the client software on PC for the Taurus series multimedia players.

ViPlex Express has multiple advantages described as follows.

- Friendly user interface: UI design takes full account of users’ habits.
- Ease of use: The Taurus series players can be connected wirelessly and accessed easily.
- Synchronous playing: Capable of playing the same content on different screens synchronously.
- Dual Wi-Fi function: Capable of setting Wi-Fi AP mode and Wi-Fi Sta mode.
- 4G connection: Capable of setting mobile data network of the Taurus with 4G module.
- Terminal binding: The Taurus series players can be easily bound to the cloud-based publishing system VNNOX and the cloud-based monitoring system NovaiCare.
Before You Begin
- Install Framework 4.6.1 or later.
- Install official Visual C++ 2017 runtime components.
- Get the installation package of ViPlex Express.

Where to Get
http://www.en.vnnox.com/#downloadT

Operating Procedure
Double click the installer and install ViPlex Express according to the setup wizard.
3 Login of Taurus

Required Information

Get the actual values of the information in Table 3-1.

Table 3-1 Required information

</tr>
</tbody>
</table>

Operating Procedures

ViPlex Express can connect to multiple Taurus series products.

Step 1 Connect PC to the Taurus series products via one of the following methods.
- Wi-Fi AP of the Taurus
- External router
- Ethernet cable

Note:
If the IP addresses of the PC and Taurus are not in the same network segment and can be pinged successfully, click Refresh and select Specify IP to connect to Taurus manually.

If the PC and Taurus are connected through Ethernet cable and there is no other DHCP servers in the network, click on the top right of the page and select DHCP Service. Then, select a local IP address and turn on DHCP service to connect to Taurus automatically.

Step 2 Start ViPlex Express.

Step 3 Click Refresh, and the screen list appears.
- Online: Denotes that the Taurus is online and you can log in it.
- Offline: Denotes that the Taurus is offline and you cannot log in it.
- Green: Denotes that logging in the Taurus is successful.

After Taurus is found by ViPlex Express, ViPlex Express will attempt to log in the Taurus automatically with the default account or the account used for last login.
Step 4  Automatic Login is successful or not.
   • Yes. ✅ is shown and the operation is finished.
   • No. ⏳ is shown. Then go to Step 5.

Step 5  Click Connect next to the screen information.

Step 6  Enter your user name and password, and then click OK.

Related Operations

Right click the screen information to see the related operations.
   • Logout: Log out of the Taurus.
   • Rename: Rename the Taurus.
   • Password Modification: Modify the password used for the user “admin” to log in the Taurus.
   • Forget password: Delete the user name and password used for last login.

If the user enter the password of the user “admin” to log in Taurus, ViPlex Express will automatically save the account information and the user can log in Taurus automatically in future. In case of selecting forget password, the user will need to enter the account information again while logging in Taurus in future.
This chapter introduces how to create, edit, delete, import, export and publish solutions.

4.1 Creating Solutions

Get the screen size before creating solutions.

Step 1  Click **New**.

Step 2  Set the solution name and resolution, and then click **OK**.

Note: You can set the resolution by clicking **Specify Terminal** and the resolution will be the same as that of the selected terminal.

The editing page of the solution appears, as shown in Figure 4-1. Each area of the page is explained in Table 4-1.

| ![Timer](image) | Timer  
Can be set as countdown or count up timer. |
| ![Colorful word](image) | Colorful word |
| ![Window](image) | Window  
All the above types of media can be added in a window. When multiple media are added, the media will be played from the top to the bottom. |

Step 3  After the solution is edited, click ![save icon](image) to save.

Step 4  (Optional) Publish the solution.

1. Click ![publish icon](image).
2. Select one or more terminals and click Publish.

   Note: ViPlex Express will automatically convert the video formats that are not supported by terminals.

### 4.2 Editing Solutions

In the solution list, perform any of the following operations to enter the solution editing page.

- Select a solution and click **Edit**.
- Click a solution name.
4.3 Deleting Solutions

In the solution list, select a solution and click **Delete**.

4.4 Importing Solutions

Step 1 Click **Import**.

Step 2 In the pop-up dialog box, click `...` to select the file path.

Step 3 Click **Next**.

Step 4 When **Progress** shows 100%, click **Done**.

4.5 Exporting Solutions

Only the solutions that contain media can be exported.

Step 1 In the solution list, perform any of the following operations.

- Exporting a single solution: Click `...` corresponding to the target solution.
- Exporting solutions in batch: Select multiple solutions and click **Export**.

Step 2 In the pop-up dialog box, click `...` to select the file path.

Step 3 Click **Export**.

Note: ViPlex Express will automatically convert the video formats that are not supported by terminals.

Step 4 When **Progress** shows 100%, click **Next**.

Step 5 Select the play mode and solution.

- **Plug and play**: As soon as the USB drive that stores the solution is inserted into the Taurus, the solution will be played. During playing, the USB drive cannot be removed.
- **Copy and play**: After the solution that is stored in the USB drive is copied to the Taurus, the solution will be played. During playing, the USB drive can be removed.

Step 6 Click **OK**.

Step 7 Enter the Taurus login password and click **OK**. If you click **Skip**, the Taurus will not identify the file.

After the USB drive that stores the solution is inserted into the Taurus, the solution will be played only if the passwords match.
4.6 Publishing Solutions

- Only solutions containing media can be published.
- Only one solution can be sent to terminals each time.
- One solution can be sent to multiple terminals simultaneously.

On the solution editing page, click at the top right to publish solutions. On the solution list page, follow the steps below to publish solutions.

Step 1 Select a solution and click Publish, or click next to the solution information.

Step 2 Click Refresh in the Publish solution dialog box to show the information of terminals which are logged in.

Step 3 Select one or more terminals and click Publish.

Note: ViPlex Express will automatically convert the video formats that are not supported by terminals.

Step 4 After the solution is successfully published, click Done.
5 Advanced Solutions

An advanced solution is a solution added with a playback schedule. Users can create, edit, delete, import, export and publish advanced solutions.

5.1 Creating Solutions

Get the screen size before creating solutions.

Step 1 Click **New**.
Step 2 Name the advanced solution.
Step 3 Click +.
Step 4 select a common solution, and set the validity range, repeating method and playback duration.
Step 5 Click **Add**.
Step 6 Click **Cancel**.
Step 7 (Optional) Click the box next to **Non-Scheduled Content** to select a solution and click **OK**.

The non-schedule content will be played by default during the non-scheduled period.

Step 8 Click **Add**.

5.2 Editing Solutions

On the advanced solution list, perform any of the following operations to enter the solution editing page.

- Select a solution and click **Edit**.
- Click a solution name.
5.3 Deleting Solutions

In the advanced solution list, select a solution and click Delete.

5.4 Importing Solutions

Step 1 Click Import.

Step 2 In the pop-up dialog box, click ... to select the file path.

Step 3 Click Next.

Step 4 When Progress shows 100%, click Done.

5.5 Exporting Solutions

Only the solutions that contain media can be exported.

Step 1 In the advanced solution list, perform any of the following operations.

- Exporting a single solution: Click corresponding to the target solution.
- Exporting solutions in batch: Select multiple solutions and click Export.

Step 2 In the pop-up dialog box, click ... to select the file path.

Step 3 Click Export.

Step 4 When Progress shows 100%, click Next.

Step 5 Select the play mode and solution.

- Plug and play: As soon as the USB drive that stores the solution is inserted into the Taurus, the solution will be played. During playing, the USB drive cannot be removed.
- Copy and play: After the solution that is stored in the USB drive is copied to the Taurus, the solution will be played. During playing, the USB drive can be removed.

Step 6 Click OK.

Step 7 Enter the Taurus terminal login password and click OK. If you click Skip, the Taurus will not identify the file.

After the USB drive that stores the solution is inserted into the Taurus, the solution will be played only if the passwords match.

5.6 Publishing Solutions

- Only solutions containing media can be published.
- Only one solution can be sent to terminals each time.
• One solution can be sent to multiple terminals simultaneously.

Step 1 Select a solution in the advanced solution list and click Publish, or click next to the solution information.

Step 2 Click Refresh in the Publish solution dialog box to show the information of terminals which are logged in.

Step 3 Select one or more terminals and click Publish.

Step 4 When Progress shows 100%, click Done.
6 Screen Control

6.1 General Function
Click the Read back button to read terminal inforamtion back to ViPlex Express and display it.

6.2 Play Management
Manage the play mode, volume and content of terminals.

6.2.1 Enabling Synchronous Playing
Enabling or disabling the synchronous playing function will restart the terminal.

Step 1 Select the target terminal in the terminal list.
Step 2 Select Enable next to Synchronous Playing.
Step 3 Click Confirm in the pop-up dialog box.

6.2.2 Adjusting Volume in Real Time
Drag the slider or enter a value to adjust volume. Volume can be adjusted only when the Taurus is in asynchronous mode.

6.2.3 Managing Terminal Solutions
- Viewing screenshot: Click View Screenshot to view the real-time screenshot of the solution which is being played on the terminal.
- Playing a solution: Move the mouse to the thumbnail of the solution and click .
- Stoping a solution: Move the mouse to the thumbnail of the solution and click .
- Deleting a solution: Select a solution in the solution thumbnail list and click Delete.

6.3 Brightness Adjustment
Manually adjust the brightness or set rules of smart brightness adjustment.
6.3.1 Manual Adjustment

Step 1  Select the target terminal in the terminal list.
Step 2  Choose Manual, and drag the slider or enter a value to adjust screen brightness.

6.3.2 Smart Adjustment

- Timing brightness adjustment: During the time period that you set to enable smart adjustment, the screen brightness will be the fixed value that you manually set.
- Auto brightness adjustment: During the time period that you set to enable auto adjustment, the screen brightness will be automatically adjusted according to the auto brightness adjustment table.

The auto brightness adjustment table divides the ambient brightness into several subsections and sets corresponding screen brightness to each subsection. The screen brightness will be automatically adjusted according to the ambient brightness subsection where the current ambient brightness belongs to.

Step 1  Choose Smart to enter the smart adjustment page.
Step 2  Perform the following operations based on actual needs.

- Creating a rule: Click . In the pop-up dialog box, choose Timing or Auto, and then set the corresponding brightness adjustment rules. At last, click Add.
- Modifying a rule: Select a rule and click . Then, modify the rule and click OK.
- Deleting rules: Select one or more rules and click . In the pop-up dialog box, click Confirm.
- Clearing rules: Click and then click Confirm in the pop-up dialog box.
- Enabling a rule: In the rule list, turn on the Enable switch next to a rule.
- Viewing the current brightness: Click .

Step 3  After configuration, click Apply.

6.4 Video Source

Control the video input mode, video source and output offset position.

6.4.1 Manual Mode

Immediately switch between the internal input source and HDMI input source.

Step 1  Select the target terminal in the terminal list.
Step 2  Choose Manual and configure parameters.
Step 3  Click Apply.

6.4.2 Timing Mode

Switch between the internal input source and HDMI input source at regular time.
Step 1 Select the target terminal in the terminal list.

Step 2 Choose **Timing**. Perform the following operations based on actual needs.

- Creating a rule: Click `+`. In the pop-up dialog box, choose **Internal** or **HDMI**, and then set the time and cycle to use the video source. At last, click **Add**.

- Modifying a rule: Select a rule and click `-`. Then, modify the time and cycle to use the video source. At last, click **OK**.

- Deleting rules: Select one or more rules and click `-`. In the pop-up dialog box, click **Confirm**.

- Clearing rules: Click ` `- and then click **Confirm** in the pop-up dialog box.

- Enabling a rule: In the rule list, turn on the **Sure to enable** switch next to a rule.

- Parameter configuration: Set the position and size of the display window.

Step 3 After configuration, click **Apply**.

### 6.4.3 HDMI Preferred Mode

The HDMI port is preferred for playing the video in the synchronous mode.

Step 1 Select the target terminal in the terminal list.

Step 2 Choose **HDMI preferred**.

Step 3 Set the position and size of the display window.

Step 4 After configuration, click **Apply**.

### 6.5 Screen Status Control

Set the current playing status of the screen.

#### 6.5.1 Manual Control

Step 1 Select the target terminal in the terminal list.

Step 2 Choose **Manual** to enter the manual settings page.

Step 3 Click **Blackout** or **Normal**.

#### 6.5.2 Timing Control

Step 1 Select the target terminal in the terminal list.

Step 2 Choose **Timing** to enter the timing settings page. Then, perform the following operations based on actual needs.

- Creating a rule: Click `+`. In the pop-up dialog box, choose **Blackout** or **Normal**, and then set the playing time and cycle of the screen. At last, click **Add**.

- Modifying a rule: Select a rule and click `-`. Then, modify the playing time and cycle of the screen. At last, click **OK**.
6.6 Time Synchronization Management

Set time synchronization rules of the Taurus.

Step 1 Select the target terminal in the terminal list.

Step 2 View the current time zone and time.

If the current time zone observes daylight saving time and it is in the daylight saving time period, **Daylight Saving Time** will be displayed as shown in **Figure 6-1**, otherwise it will not be displayed.

**Figure 6-1 Time zone and time**

Step 3 Select a time synchronization mode.

- **Manual**: Select a time zone from the **Time zone** drop-down list and the Taurus will synchronize the time according to the time in the selected time zone. The time displayed under **Manual** is a reference value calculated by ViPlex Express based on the selected time zone.
  
  \[ \text{Standard time} = \text{UTC} + \text{Time offset} \]
  \[ \text{Daylight saving time} = \text{UTC} + \text{Time offset} + \text{Daylight saving time offset} \]

- **NTP**: After an NTP server is configured, choose the configured NTP server from the Server drop-down list, and the Taurus will synchronize the time according to the NTP server time.

  Note: To configure an NTP server, click **Custom server** at the top right of the page and choose Custom server.

- **RF**: After you install a time synchronization device, set the following information for time synchronization.

  Note: You can check the installation status of the RF module by clicking RF module detection.

  - **Group ID**: Enter the same group ID for the Taurus units that need time synchronization. That means you put those Taurus units in the same group.
  - **Reference device of time synchronization**: Other Taurus units in the same group will synchronize the time according to the time of the reference device.
  - **Time source of reference device**: The reference device can synchronize the time according to the NTP server time.
Step 4 After setting, click Apply.

6.7 Restart Configuration

Restart terminals immediately and configure restart rules.

6.7.1 Restarting Immediately

Step 1 Select the target terminal in the terminal list.
Step 2 Click Restart promptly.
Step 3 Click Confirm in the pop-up dialog box to restart the terminal immediately.

6.7.2 Configuring Restart Rules

Step 1 Perform the following operations based on actual needs.

- Creating a rule: Click Add. Set the time and cycle to restart a terminal in the pop-up dialog box and then click Add.
- Modifying a rule: Select a rule and click OK to modify the time and cycle to restart a terminal and then click OK.
- Deleting rules: Select one or more rules and click Remove. Then click Confirm in the pop-up dialog box.
- Clearing rules: Click Clear and then click Confirm in the pop-up dialog box.
- Enabling a rule: In the rule list, turn on the Sure to enable switch next to a rule.

Step 2 After setting, click Apply.

6.8 Color Temperature

Set the screen display's color temperature, including neutral white, standard white and cool white.

Step 1 Select the target terminal in the terminal list.
Step 2 Select a color temperature type.

6.9 Monitor

Step 1 Select the target terminal in the terminal list.
Step 2 Check the terminal hardware information listed below. If the terminal has an external storage device, you can also check the external storage information.

- Disk size
- Memory availability
- CPU usage
6.10 Play Log

View and export play logs.

6.10.1 Viewing Play Logs

Step 1 Select the target terminal in the terminal list.
Step 2 Choose the time range of the play log that you want to view and then click Query.
Step 3 In the play log list, click a play log name to view the summary and detailed information of the log.

6.10.2 Exporting Play Logs

Step 1 Select the target terminal in the terminal list.
Step 2 In the play log list, select the target play log.
Step 3 Click Export.
Step 4 In the pop-up dialog box, choose the export path and format.
Step 5 Click OK.

6.11 Font Management

Manage the fonts used by the Taurus.

6.11.1 Adding Font Names

Step 1 Select the target terminal in the terminal list.

Step 2 Click + next to Name to acquire local fonts on the PC.
Step 3 Select the target font in the pop-up dialog box.
Step 4 Click OK.
Step 5 Click Update. The update progress will be shown in the Update result column.

6.11.2 Deleting Fonts

Step 1 Select the target terminal in the terminal list.

Step 2 Click Read back at the bottom right to read back the fonts on the terminal.
Step 3 Click the link in the Font column of the target terminal. The Font list in terminal page is displayed.
Step 4 Select target fonts.

Step 5 Click **Delete**.

6.12 Network Configuration

Configure current network, including wired network, Wi-Fi AP, Wi-Fi Sta and mobile network.

6.12.1 Configuring Wired Network

It is required to set static IP address for Taurus while connecting Taurus via Ethernet cable. Set IP address based on actual needs while connecting Taurus to the Internet via Ethernet cable.

Step 1 Select the target terminal in the terminal list.

Step 2 In the **Wired network configuration** area, perform the following operations based on actual needs.

- Select **Enable** next to **Dynamic DHCP** to get IP address automatically.
- Deselect **Enable** next to **Dynamic DHCP** and configure static IP address.

Step 3 Click **Apply**.

6.12.2 Configuring Wi-Fi AP

The default SSID of terminal Wi-Fi AP is “**AP + the last 8 digits of the SN**” and the default password is “**12345678**”.

Step 1 In the **Screen AP configuration** area, turn on **AP**.

Step 2 Enter the SSID and password of terminal Wi-Fi AP.

Step 3 Click **Apply**.

6.12.3 Configuring Wi-Fi Sta

If the external router is connected to the Internet, terminals can access Internet via the external router after Wi-Fi Sta is configured.

Step 1 In the **Wi-Fi configuration** area, turn on **Wi-Fi**.

Step 2 Double click the Wi-Fi information of the external router, enter password and then click **OK**.

6.12.4 Configuring Mobile Network

Terminals with 4G module can access Internet via mobile network.

Step 1 Insert 4G card into the slot.

Step 2 On the Mobile network configuration page, turn on Mobile network.

Step 3 Click **»** to expand the APN configuration page.
6.13 Server Configuration

6.13.1 Binding VNNOX Players

You can bind a terminal to VNNOX Lite and create an asynchronous player, or bind to an existing asynchronous player on VNNOX Pro. Multiple terminals can be selected and bound to VNNOX Lite in batches.

Viewing Authentication Information

Step 1 Visit http://www.vnnox.com and log in to VNNOX Lite or VNNOX Pro.

Step 2 Enter the player authentication information page and view the server address, authentication user name and password.

- VNNOX Lite: Choose > Account.
- VNNOX Pro: Choose > Organization Management > System Management and click the Player Authentication tab.

Binding Players

Step 1 Select the target terminal from the terminal list.

Step 2 In Configure parameters for connecting screens to VNNOX, select VNNOX server and enter the authentication user name and password. The authentication information must be consistent with the information on VNNOX.
Step 3 Click next to Player.
Step 4 Perform one of the following operations as required and click Bind.
  - Select Bind to VNNOX Lite from the drop-down list to bind the terminal to VNNOX Lite and create an asynchronous player.
  - Select an asynchronous player from the drop-down list to bind the terminal to the existing player on VNNOX Pro.

6.13.2 Binding NovaiCare

Terminals can be registered on NovaiCare. Multiple terminals can be selected for batch operations.

Step 1 Select the target terminal from the terminal list.
Step 2 In Configure parameters for connecting screens to NovaiCare, select NovaiCare server and enter the login user name.
Step 3 Click Send.

6.14 Screen Upgrade

Upgrade the application software and system software of terminals.

Note: Keep the power on during upgrade.

6.14.1 Upgrading Application Software

Step 1 Select Screen software.
Step 2 Select upgrade package path.
Step 3 Select one or more terminals in terminal information list and click Upgrade.

6.14.2 Upgrading System Software

Step 1 Select Screen system.
Step 2 Select upgrade package path.
Step 3 Select one or more terminals in terminal information list and then click Upgrade.

6.15 Screen Information

Information displayed here includes the terminal MAC address, terminal IP address, system software version, product model, application software version.

6.16 Power Control

Turn on or off screens remotely.
- Turn on a screen
  Turn on **Board power** to make the relay on the terminal operating and turn on the circuit connected to the screen.
- Turn off screen
  Turn off **Board power** to release the relay on the terminal and turn off the circuit connected to the screen.
7 System Settings

At the top right of the page, click 🔄 and select the required menu.

Table 7-1 System settings

<table>
